Problem Statement

- The traditional interior design process is often marked by challenges such as limited personalization, time-consuming procedures, and difficulties in visualizing design concepts.

- Additionally, other associated industries face hurdles in presenting customizable and appealing visualizations to clients. DesignDreamer addresses these challenges by leveraging Generative AI and cutting-edge technologies.

Objective

- The primary objective of our project, DesignDreamer, is to empower users to visualize and customize their living spaces through the application of state-of-the-art Generative AI.

- We aim to provide a seamless and interactive platform where users can upload images of their rooms, specify design preferences, and room type, and receive an AI-generated reimagining of their space.

Abstract

- DesignDreamer represents a futuristic vision in the realm of Generative AI, harnessing advanced technologies to elevate interior design into a personalized and visually stunning experience.

- For users, it becomes as simple as choosing style preferences and room types, for the uploaded image to effortlessly visualize and co-create their dream environments.

Tools & Technologies

- Python: The primary programming language for implementing the core functionalities of the Generative AI model.
- Streamlit: A powerful GUI library in Python used for creating an interactive and user-friendly interface.
- Replicate: A scalable deployment tool facilitating the integration of custom models into a production environment through API calls.

Target Users

1

Homeowners and Individuals

2

Real Estate Professionals

3

**Architects and
Interior Design Professionals**

Applications

- **Personal Interior Design**: Empowering individuals to visualize and customize their living spaces based on personal preferences.
- **Real Estate**: Enhancing property showcasing by providing potential buyers with personalized design previews.
- **Hospitality Industry**: Enabling hotels and resorts to showcase different room styles to potential guests.
- **Furniture Retail**: Allowing customers to preview furniture and decor in their own spaces before making purchase decisions.

Timeline

1. Project Setup and Development Kickoff
2. App Enhancement and Testing
3. Refinement & Finalization

Thank You!
